

Node.js + E-commerce باستخدام Node.js + E-commerce التي محتاجها لمشروع Backend components لو قصدك إيه الـ
Express + MongoDB، كده Modules فالأفضل تقسميه:

1. Users / Authentication

- Register
- Login
- Logout
- JWT Authentication
- Password hashing بـ bcrypt
- Forgot Password
- OTP verification
- Reset Password
- Update profile
- Change password
- User roles:
 - user
 - admin

2. Products

ممکن يكون فيه كل Product كل

```
{  
  name,  
  description,  
  price,  
  discount,  
  category,  
  brand,  
  images,  
  stock,  
  ratings,  
  isActive
```

```
}
```

APIs: والـ

POST /products

GET /products

GET /products/:id

PUT /products/:id

DELETE /products/:id

Add / Update / Delete. فقط هو اللي يعمل Admin والـ

3. Categories

POST /categories

GET /categories

PUT /categories/:id

DELETE /categories/:id

مثلاً:

Electronics

Clothes

Shoes

Beauty

Books

4. Cart

Cart: يكون عنده User كل

```
{  
  userId,  
  items: [  
    {  
      productId,  
      quantity,  
      price
```

```
}  
],  
totalPrice  
}
```

APIs:

```
GET /cart  
POST /cart  
PUT /cart/:productId  
DELETE /cart/:productId  
DELETE /cart
```

5. Wishlist ❤️

```
GET /wishlist  
POST /wishlist/:productId  
DELETE /wishlist/:productId
```

6. Orders 📦

دي من أهم أجزاء المشروع

```
{  
  userId,  
  products,  
  shippingAddress,  
  totalPrice,  
  paymentMethod,  
  paymentStatus,  
  orderStatus  
}
```

مثلاً:

```
pending  
confirmed
```

shipped
delivered
cancelled

APIs:

POST /orders
GET /orders
GET /orders/:id
PUT /orders/:id/cancel

يحتاج Admin والـ:

GET /admin/orders
PUT /admin/orders/:id/status

7. Reviews & Ratings ★

للمنتجات Review المستخدم يقدر يعمل:

```
{  
  userId,  
  productId,  
  rating,  
  comment  
}
```

APIs:

POST /products/:id/reviews
GET /products/:id/reviews
PUT /reviews/:id
DELETE /reviews/:id

8. Search / Filter / Sort

E-commerce. مهم جدًا في

مثلاً:

/products?search=iphone

/products?category=electronics

/products?minPrice=100&maxPrice=1000

/products?sort=price_asc

ويمكن تضيفي:

- Pagination
- Search
- Filter by category
- Filter by price
- Sort by price
- Sort by rating
- Newest products

9. Address / Shipping

المستخدم يكون عنده:

```
{  
  city,  
  street,  
  building,  
  apartment,  
  phone  
}
```

ويمكن:

POST /addresses

GET /addresses

PUT /addresses/:id

DELETE /addresses/:id

10. Payment 🇸🇦

:لو المشروع للتدريب، ممكن تبدأي بـ

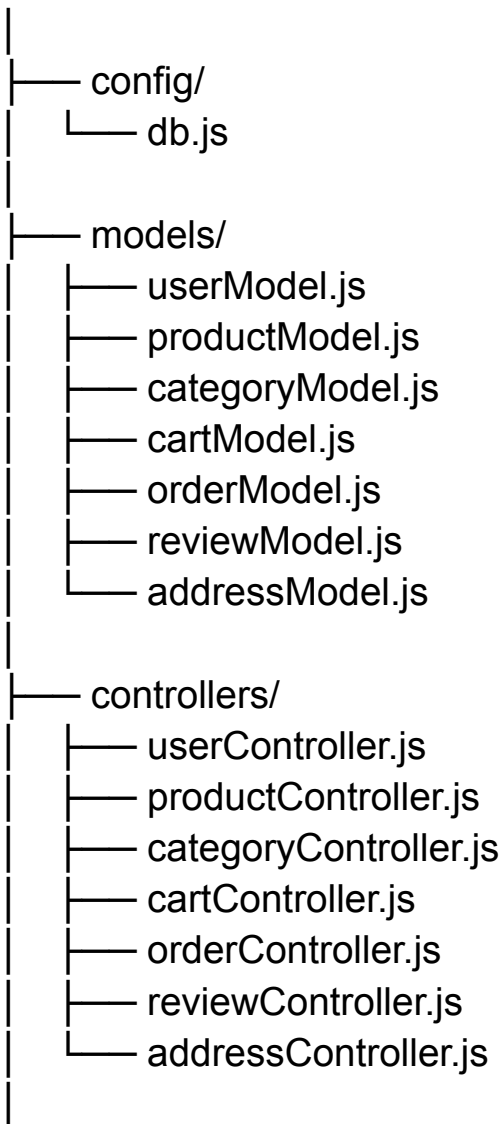

Cash on Delivery

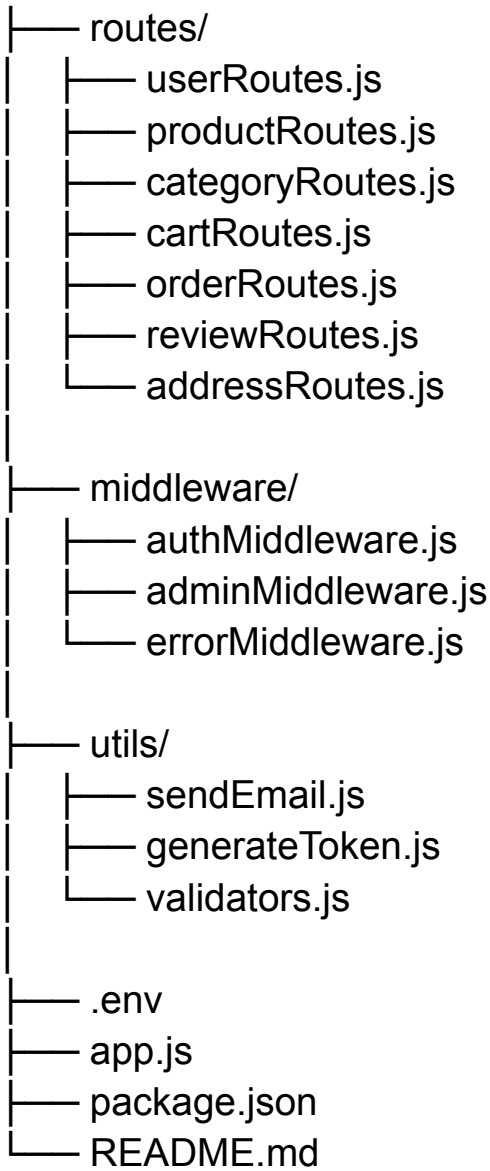

Payment Gateway. وبعد كده تضيفي

مناسب لمشروعك Structure

:أنصحك بعمله بالشكل ده ،Express و Node.js بما إنك بتتعلمي

ecommerce-backend/

ترتيب التنفيذ اللي أنصحك بيه

:ما تعملش المشروع كله مرة واحدة. امشي بالترتيب

Phase 1

MongoDB

User Model

Register

Login

JWT

Auth Middleware

Admin Middleware

Phase 2

Category

Product

CRUD

Search

Filter

Pagination

Phase 3

Cart

Wishlist

Address

Phase 4

Order

Order Status

Reviews

Ratings

Phase 5

Email

OTP

Forgot Password

Payment

Deployment
